What are the different statuses of members and products?

Last Modified on 07/10/2019 8:29 am AEDT

After registration has been completed by a member, a member can have a few different statuses depending on the products purchased within the registration. These status can be for the member themselves in relation to their financial status but they can also be related to the product.

Inactive- if a product is inactive it means that the product has expired and is no longer active, while if a member is inactive they will either be unregistered (if all are lights are red) or they will be unregistered for that particular level.

Active- the product and member are currently registered.

Pending active - the product or member are not yet active as the product the member purchased within the form will only become active and the member will be fully registered after the specific start date set on that product.
