## Overview

As part of our partnership with **Pride in Sport Australia**, GameDay is proud to support the collection of gender identity data across the product suite wherever gender data is collected. This implementation has brought about updated terminology and input fields to better capture information, as well as represent and include people of diverse genders and sexualities. It also integrates more inclusive gender identity fields into applicable registration forms, member lists, member profile screens, reports, and dashboards.

[Top](#)

## Gender Options

The below fields are available to use on registration forms and member records in GameDay:

### Gender at Birth

The **Gender at Birth** field is the sex the member was given at birth which is specified on their birth certificate. The options available are:

- **Male**
- **Female**

### Gender Identity

This is a new field included within forms and member records to allow your members to specify their current gender identity. This includes the following options:

- **Male**
- **Female**
- **Non-binary/gender fluid**
- **Different Identity** - if selected a text box will appear for the user to enter their identity
- **Prefer not to say**

You can find both Gender fields on back-end [member profiles](#):

The screenshot shows a user profile for Aaron Johnson, born on 01/06/2016. The profile status is 'Active'. The 'Basic Details' section is highlighted with a red box, showing 'Gender' and 'Gender Identity' both set to 'Male'. Other details include an email address (aaron@email.com), mobile phone (+61 0400 100 200), home phone (+61 (03) 9000 8000), and home address (165 Cremorne Street, Cremorne, Victoria 3121, Australia).

When creating a [Membership Form](#) or [Event](#) (found in the Questions & Layout tab). Whilst both of these fields are enabled on forms by default, you can hide either of them from your form using the **Visible/Hidden** toggle option:

The screenshot shows the '2025 Membership' form configuration interface. The 'Questions & Layout' tab is selected. A list of fields is shown with their respective visibility settings. The 'Gender at Birth' and 'Gender Identity' fields are highlighted with a red box, showing their 'Mandatory' and 'Optional' status, and their 'Visible' or 'Hidden' toggle.

Field Name	Mandatory	Optional	Visible/Hidden
Profile Image	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Visible
Firstname	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Visible
Lastname	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Visible
Birthdate	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Visible
Gender at Birth	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Visible
Gender Identity	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Hidden
Gender Identity - Other	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Visible

If enabled, they will then show on front-end Membership or Event Forms:

Last Name \*

Birthdate \*

Gender at Birth \* ?

 Male Female

Gender Identity ?

 Male Female Non-binary/gender fluid Different Identity Prefer not to say
