## How do I enforce a purchase limit on my event products?

Last Modified on 06/03/2024 10:21 am AEDT

Gameday Events allows administrators to set a minimum and maximum product purchase limit for event-related products. This process can be used if an administrator wants a certain number of products to be purchased before an entrant can complete their registration.

To set the minimum/maximum value of an Event product:

1. Click Events > MANAGE EVENTS

2. Find the relevant event and click EDIT

3. Click on the Event Products \& Groups tab, then find the relevant Product and click EDIT

4. Set the Allow users to purchase a product multiple times option to YES

5. Input the MINIMUM amount of times this product can be purchased.
```
MInImum purchase llmit for each product*
```

6. Input the MAXIMUM amount of times this product can be purchased.

Maximum purchase limit for each product *

Note: The min/max value cannot exceed the QUANTITY LIMIT value set for the event product.

You can change these values at any time for the event product.
Once these values are in place, they will be displayed on the event so entrants know
the minimum and maximum quantity of a product they can select before continuing through the form.
