

## Form with Bundle Discount

Last Modified on 30/03/2023 11:51 am AEDT

This gives an overview of how bundle discounts display for a user **FOR PRODUCTS** when going through the form. If wanting to use product group this will be similar for the user, it will just apply to the relevant product group selected.

The form will be similar depending on the type of discount applied (amount and percentage) to products so only percentage will be used an example here.

*In this scenario I have created a bundle discount called TEST BUNDLE where two products, Ash Discount Product 1 and Ash Discount Product 2, when selected receive a 10% discount. An extra product (not related to the discount) is also part of the form and will be used to explain what happens when a user only selects one product from the bundle later on.*

1. Users will log into the form and input personal details.

Within the **PRODUCTS** part of the form, users can see the Ash Discount Product 1 and Ash Discount Product 2.

2. Select **BOTH** products (Ash Discount Product 1 and Ash Discount Product 2).

1. Basic Info	2. Products	3. Questions	4. Summary	5. Payment	6. Success

### Select your products

<p><b>Bundle Discount 1 Ash</b> <span style="float: right;">\$ 45.00 AUD <input type="checkbox"/></span></p> <p>PVT National Body</p> <p><i>Processing Fee \$ 0.18 AUD</i></p>
<p><b>Ash Discount Product 1</b> <span style="float: right;">\$ 30.00 AUD <input checked="" type="checkbox"/></span></p> <p>PVT National Body</p> <p><i>Processing Fee \$ 0.12 AUD</i></p>
<p><b>Ash Discount Product 2</b> <span style="float: right;">\$ 45.00 AUD <input checked="" type="checkbox"/></span></p> <p>PVT National Body</p> <p><i>Processing Fee \$ 0.18 AUD</i></p>

Next

3. Continue through form until you get to the **SUMMARY** page.

Here you will see that the 10% discount has been applied for both products that were part of that bundle and this has also applied to the total price for this registration.

- *In this example, Ash Discount Product 1 was worth \$30.00 > 10% of \$30.00 is \$3.75 > \$30.00 - \$3.75 = \$26.25. Ash Discount Product 2 was worth \$45.00 > 10% of \$45.00 is \$3.75 > \$45.00 - \$3.75 = \$41.25.*
- *If you add both discounts together (\$3.75 x2 products) you get a total of \$7.50, which is then taken off the total price for the registration.*

**NOTE: processing fees are excluded from discounts so will still apply to the total amount.**

2. Products 3. Questions 4. Summary 5. Paymen

Products

Ash Discount Product 1	<del>\$30.00 AUD</del> \$ 26.25 AUD
Test Bundle - \$3.75	remove item
Processing Fees \$ 0.10 AUD	
Ash Discount Product 2	<del>\$45.00 AUD</del> \$ 41.25 AUD
Test Bundle - \$3.75	remove item
Processing Fees \$ 0.16 AUD

**Test Bundle**  
 Discount applied to products: Ash Discount Product 1, Ash Discount Product 2. This discount has been applied across 1 registration.  
 You are receiving a discount of \$7.50

Subtotal	\$ 75.00 AUD
Test Bundle	- \$ 7.50 AUD
Processing Fees	\$ 0.26 AUD
<b>Total</b>	<b>\$ 67.76 AUD</b>

This lists the bundle discount that these products were part of – in this scenario it was “TEST BUNDLE”.

This displays the price of each product based on the 10% discount set for each product in the bundle discount “TEST BUNDLE”.

This displays the name of the bundle and what products this bundle applied to and the discount combined for both product.  
 The discount for both products was 3.75 so 3.75 x2 is 7.50 which has been applied to the total price of the registration.

In the above listed scenario, if you were also were to purchase a product that was not part of the bundle, then the total price of the registration would include the discounted products as well as any full priced products (outside the bundle) that were selected.

- *BD Ash was not part of the bundle discount so this product will be at full price*
- *Ash Discount Product 1 and Ash Discount Product 2 have had their discount applied accordingly.*
- *The total price of the product will include those discounted products as well as the full priced product selected.*
  - *The total price of all three products (with no discount) would have been \$120, so if minus the discount for both of the bundle discounted products (which is \$7.50) the total is now \$112.94 (incl fees).*

Products

<b>BD Ash</b> Processing Fees \$ 0.18 AUD	\$ 45.00 AUD <a href="#">remove item</a>
<b>Ash Discount Product 1</b> Test Bundle - \$3.75 Processing Fees \$ 0.10 AUD	<del>630.00 AUD</del> \$ 26.25 AUD <a href="#">remove item</a>
<b>Ash Discount Produc 2</b> Test Bundle - \$3.75 Processing Fees \$ 0.16 AUD	<del>645.00 AUD</del> \$ 41.25 AUD <a href="#">remove item</a>

**Test Bundle**

Discount applied to products: Ash Discount Product 1, Ash Discount Produc 2. This discount has been applied across 1 registration.  
You are receiving a discount of \$7.50

Subtotal	\$ 120.00 AUD
Test Bundle	- \$ 7.50 AUD
Processing Fees	\$ 0.44 AUD
<b>Total</b>	<b>\$ 112.94 AUD</b>

Product that is not part of the bundle – will be full price.

Products that were part of the bundle discount have had the discount applied.

Total price of the products that include the discounted products and original priced product

In the above listed scenario, if you were also were to purchase a product that was not part of the bundle but ONLY ONE of the products from within the bundle discount, the discount will become void and not apply as you have not selected all products that are part of the bundle.

Bundle discounts rely on having all products within the bundle selected in order for the discount to apply.

- I selected *BA Ash* (product outside bundle) but only *Ash Discount Product 1* (part of bundle), then the discount has not applied as both *Product 1* and *Product 2* are required to apply this discount.
