Form with Standard Discount (multiple quantity)

Last Modified on 23/05/2022 12:37 pm AEST

This gives an overview of the form for users when using a Standard discount (multiple quantity), which means that the discount only applies for one quantity of the product/s selected. This can be applied for multiple quantities of the one product or multiple quantities of more than one product.

The form will be similar depending on the type of discount applied (amount and percentage) to products so only percentage will be used as an example here.

In this scenario a standard discount (multiple quantity) called "MULTI DISCOUNT ASH" was created with a 5% discount when purchasing one of the product, 10% discount when purchasing two of these products.

1. Users will log into the form and input personal details.
2. Within the **PRODUCTS** part of the form a member will need select a generic product (eg membership fee).
3. Select the relevant product from the **ADD ON** part of the form.

In this scenario, two quantities of Basketball Shorts are selected but only one quantity of the DB Jersey.

Select your Add-on products

Basketball Shorts	\$ 90.00 AUD	✓
PVT National Body		
Delivery Method: Delivery		
Processing Fee \$ 0.35 AUD		
M	- 2 +	Max: 5

DB Jersey	\$ 110.00 AUD	✓
PVT National Body		
Delivery Method: Delivery		
Processing Fee \$ 0.43 AUD		
M	- 1 +	Max: 5

← Back Next →

4. Continue through form until you get to the **SUMMARY** page.

Here you will see that a 5% discount has been applied to the DB Jersey that was selected once

and a 10% discount was applied to the Basketball Shorts that were selected twice as well as to the total price of the registration.

- In this scenario based on the MULTI DISCOUNT ASH, as the Basketball Shorts were selected TWICE they receive a 10% discount ($\$90 \times 2 = \$180 > 10\% \text{ of } \$180 = \$18 > \$180 - \$18 = \$162.00$)
- In this scenario based on the MULTI DISCOUNT ASH, as the DB Jersey was only selected ONCE, only a 5% discount is applied ($\$110 - 5\% = 5\% \text{ of } \$110 = \$5.50 > \$110 - \$4.50 = \104.50)
 - In this scenario the total discount of 15% is applied to the total of the registration ($\$45 + 180 + 110 = \$335.00 > \$335.00 - 15\%$ (total of basketball shorts (10%) and jersey discount (5%)) = $\$312.72$)

NOTE: processing fees are excluded from discounts so will still apply to the total amount.

The screenshot shows a shopping cart for 'Hope Mikaelson'. The items are:

- BD Ash:** Price \$45.00 AUD, Processing Fees \$0.18 AUD. A blue box highlights this item with the note: "Product not part of discount sits with full price."
- Basketball Shorts:** Qty: 2, Size (Default): M, Price \$162.00 AUD (original price \$180.00). A yellow box highlights the "Multi Discount Ash - \$18.00" and a purple box highlights the item with the note: "Product was selected TWICE so based on the MULTI DISCOUNT ASH discount a 10% discount was applied to the total of this product."
- DB Jersey:** Qty: 1, Size (Default): M, Price \$104.50 AUD (original price \$110.00). A yellow box highlights the "Multi Discount Ash - \$5.50" and a red box highlights the item with the note: "Product was only selected ONCE so based on the MULTI DISCOUNT ASH discount a 5% discount was applied to the total of this product."

Below the items is a section for a voucher code (NSW Government) and a "Register Another Person" button.

The summary at the bottom shows:

Subtotal	\$ 335.00 AUD
Multi Discount Ash	- \$ 23.50 AUD
Processing Fees	\$ 1.22 AUD
Total	\$ 312.72 AUD

A yellow box highlights the "Multi Discount Ash" line item with the note: "The discount from both products has applied to the total of the registration as well."
