2. Toggling Dark Mode

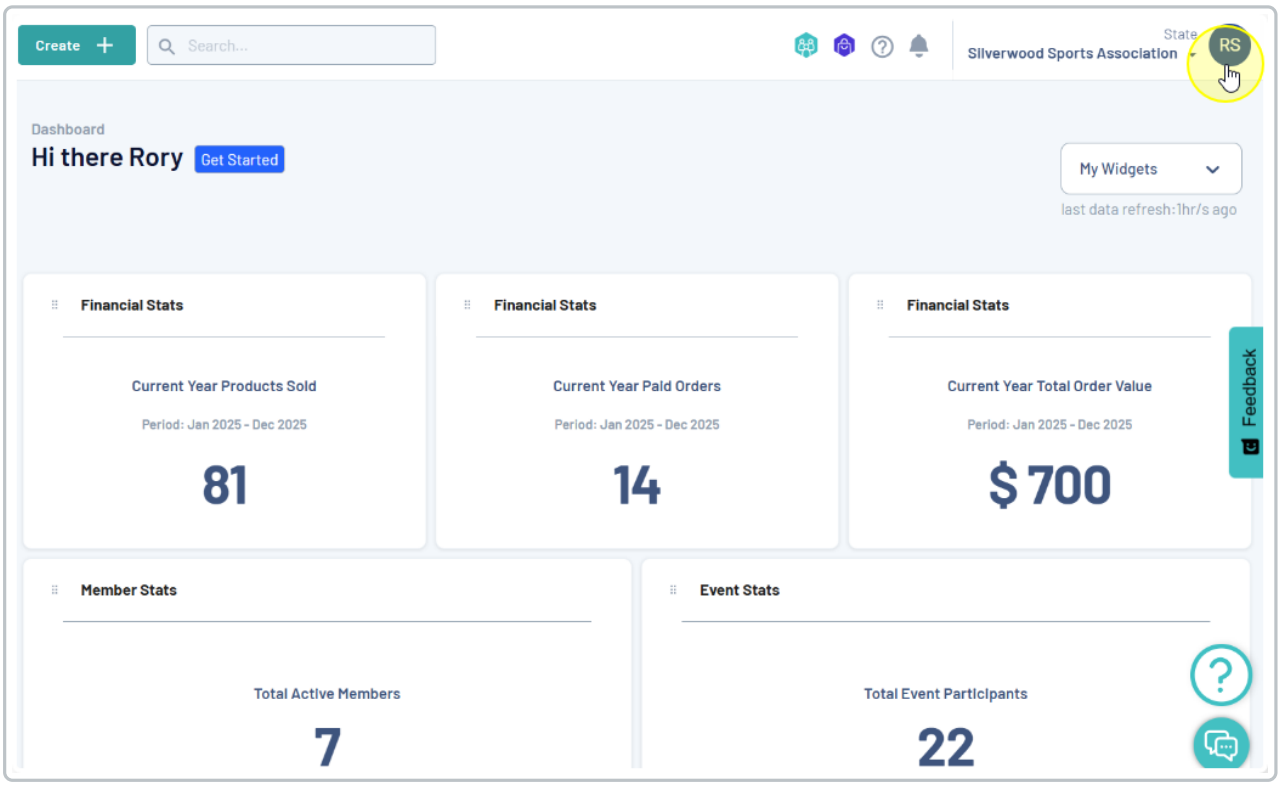

Overview

GameDay allows you to view and navigate the system using **Dark Mode**, which gives you the ability to view the system in a darker colour scheme, which may assist some users in viewing content with greater contrast or simply viewing the platform in a different aesthetic based on personal preference. By default, GameDay will apply dark or light mode based on the system settings of your device.

Top

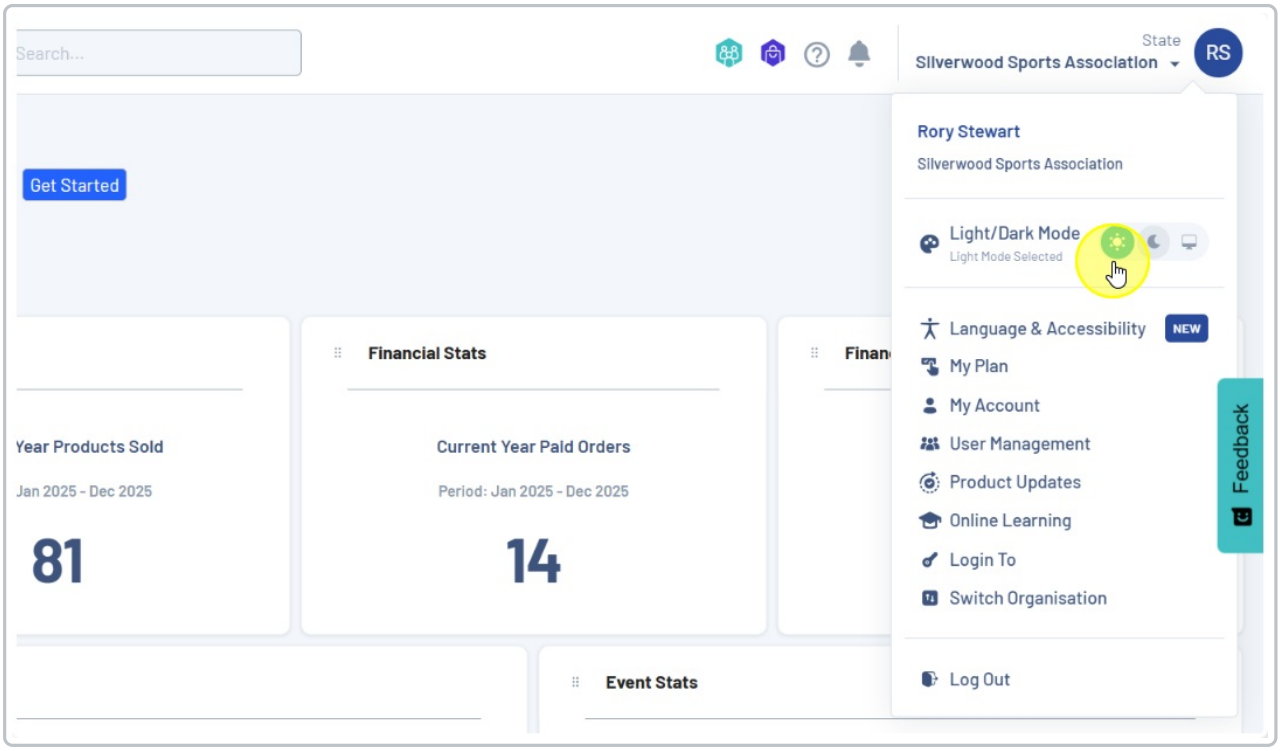

Toggling Dark Mode

To toggle between Dark Mode and Light Mode, click on your user avatar in the top right-hand corner

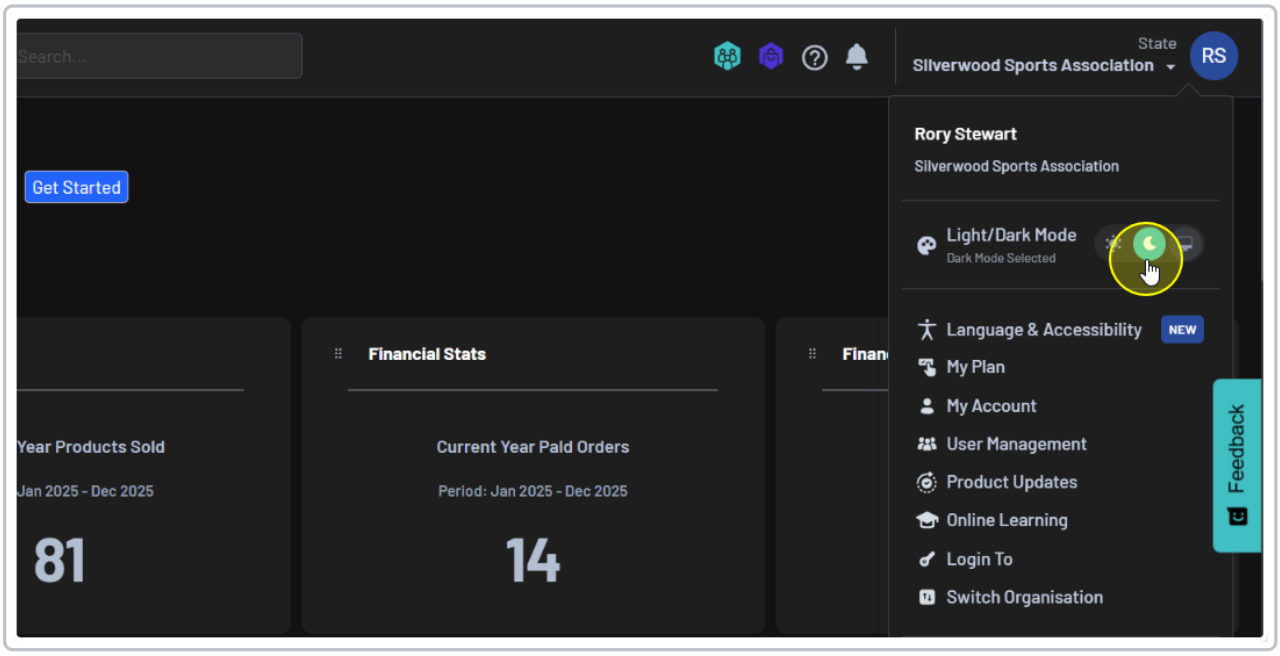

Then in the **Light/Dark Mode** section, you can apply three different options:

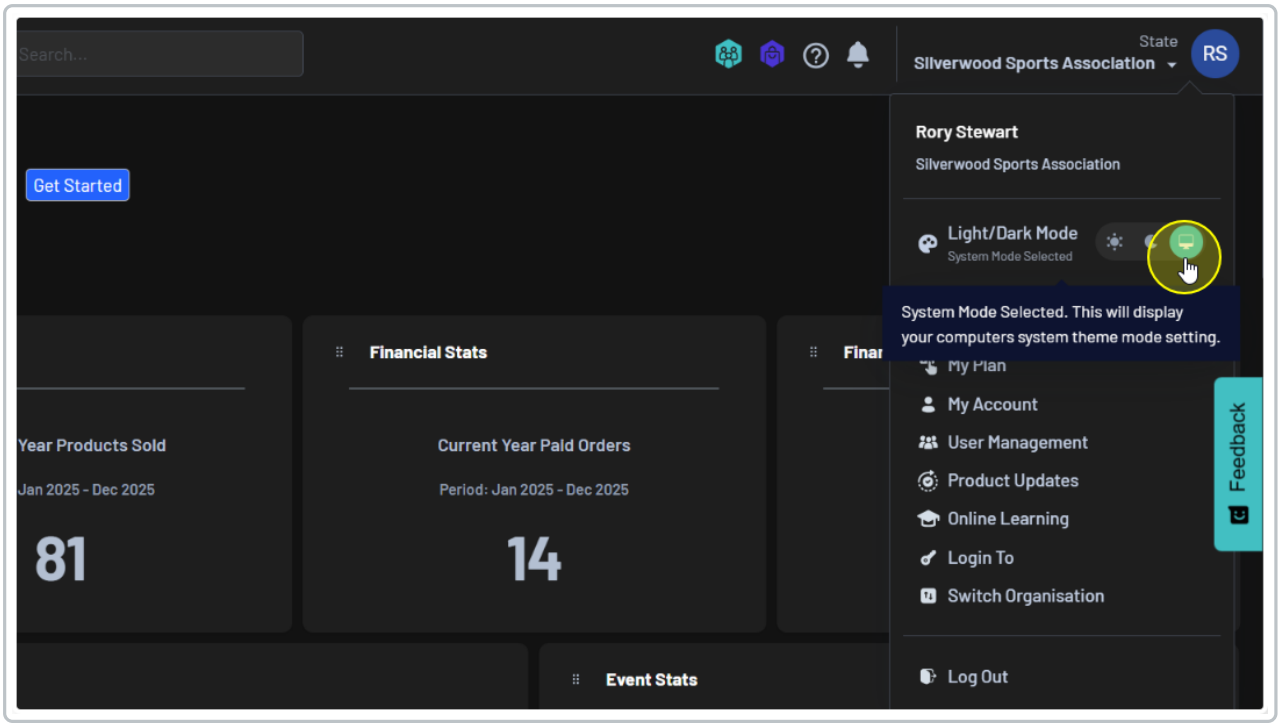

Light Mode: Applies the standard light colour scheme to your GameDay database

Dark Mode: Applies the standard light colour scheme to your GameDay database

System Mode: Applies either Light Mode or Dark Mode based on the current light/dark theme selected on the device you are using

NOTE: When you apply a theme, the platform will remember the mode selected and retain the display settings the next time you access the platform.
