

# User Role Permissions

Last Modified on 12/11/2024 11:57 am AEDT

## Overview

User Role Permissions allow GameDay administrators to customise the level of access and permissions available to any new users being added to their database, based on their general role within the organisation. This provides additional flexibility in the security and privacy of your data, and gives you a structure with which to assign roles to your administrators.

## User Role Permissions

- **Super-User:** The Super User role enables full permission to manage all of your organisations available modules with create, edit and view access including financial settings and enabling other users.

**Note:** Any super-user assumes the role of 'Primary Contact' so each super-user will get all automated notifications that get sent to an organisation under the existing 'Primary Contact' setting

- **Administrator:** The Administrator role enables full permission to manage all of your organisations available modules with create, edit and view access excluding financial settings, billing details and the ability to grant access to other users
- **Edit-Only:** The Edit-Only role enables limited permission to manage your organisations available modules with edit, view and export access only
- **Read-Only:** The Read Only role enables limited permission to your organisations available modules with view & export access only

User Role	Add + Create	Edit	View + Export Data	Report Builder	Financial Configuration	Manage Users	Manage Customer Plan
Super-User	✓	✓	✓	✓	✓	✓	✓
Administrator	✓	✓	✓	✓			
Edit-Only		✓	✓				

Read-Only
